

AT-A-GLANCE

Industrial Secure Remote Access

Secure Access Can't Wait in OT Environments

Industrial environments weren't designed with cloud connectivity and remote access in mind, so modern OT operators are inheriting new cybersecurity risks and challenges like:

-  **Attack surface expansion due to digital transformation**
-  **Aging and end-of-life software with difficult updates**
-  **Increasingly stringent global supply chain regulations**
-  **Industry-specific regulatory compliance requirements**

Safous Industrial Secure Remote Access (I-SRA) addresses these challenges head-on. Built for OT environments, I-SRA delivers zero trust security across the entire industrial environment, so your teams can securely connect people to your infrastructure from anywhere.

Use Cases

Secure remote access for **third-party vendors**

Modernize **legacy system** security

Manage **critical and high-risk** accounts

Achieve **regulatory compliance**

Benefits

Keep data inside your trust boundary with identity-based controls, supervision, and full audit trails.

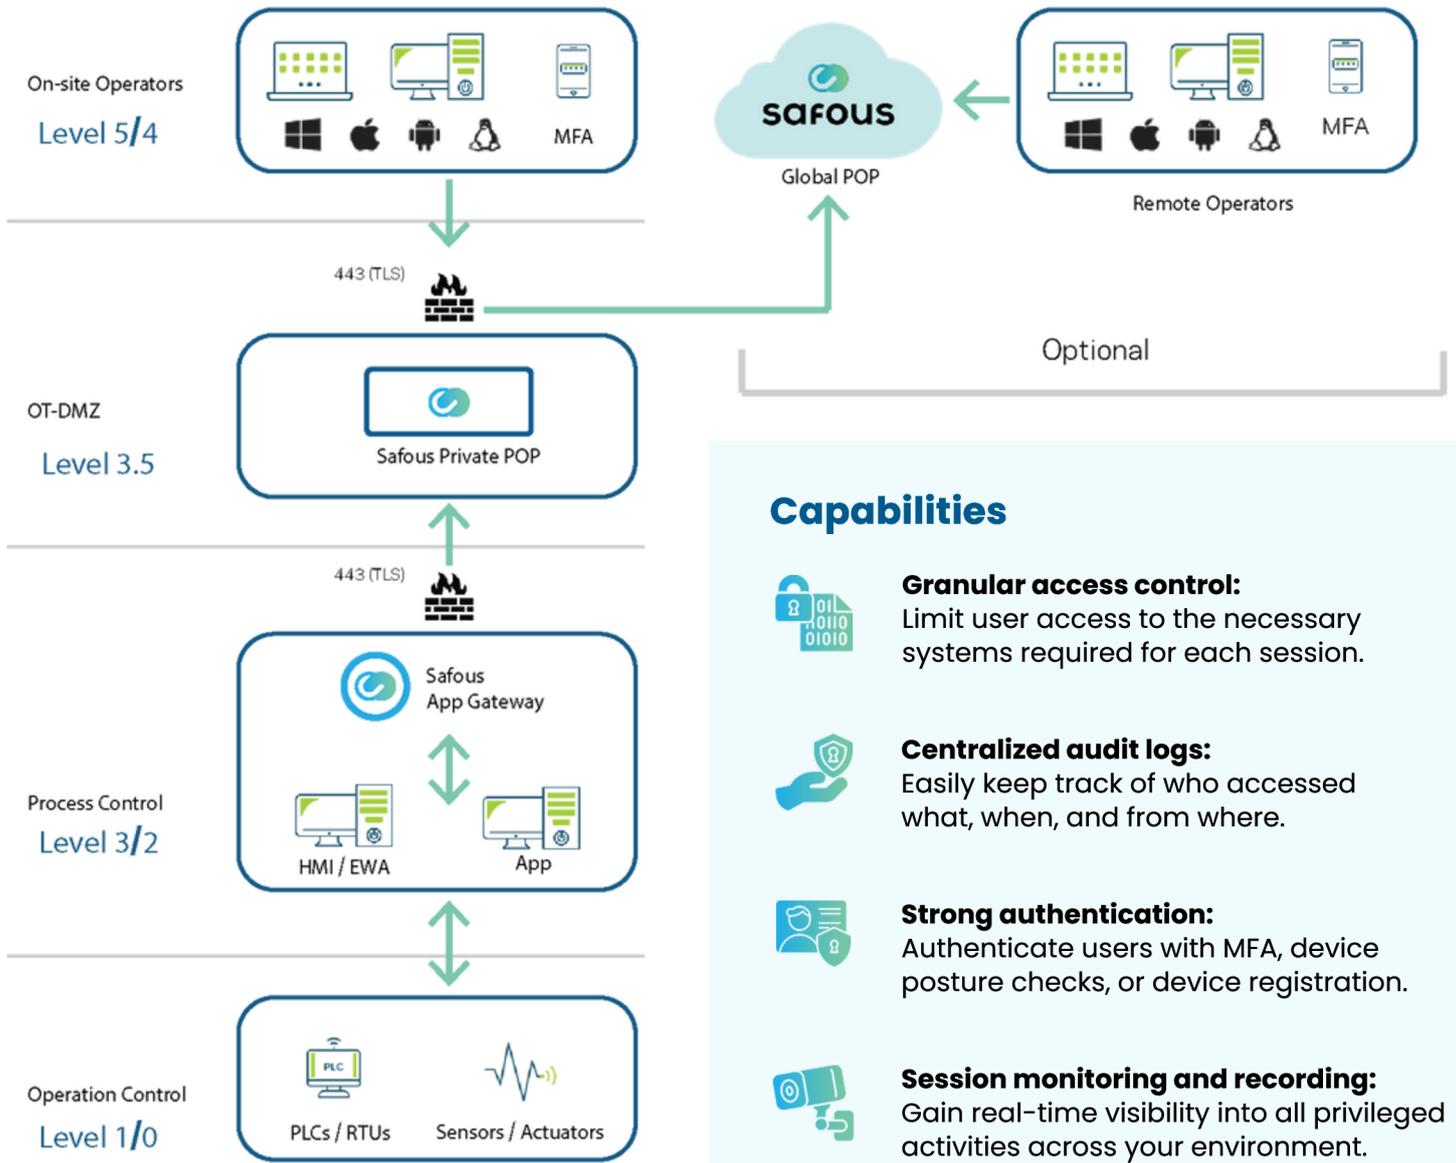

Extend zero trust security to your legacy systems by deploying on-prem, cloud, & hybrid - simultaneously.

Enjoy agentless deployment and centralized administration on a highly reliable, low-latency platform.

How Safous I-SRA Works

Capabilities

Granular access control:

Limit user access to the necessary systems required for each session.

Centralized audit logs:

Easily keep track of who accessed what, when, and from where.

Strong authentication:

Authenticate users with MFA, device posture checks, or device registration.

Session monitoring and recording:

Gain real-time visibility into all privileged activities across your environment.

Credential vaulting and SSO:

Eliminate password handling by storing login info for privileged accounts.

Just-in-time (JIT) access:

Provide access only when needed, with supervisory approval.

Air-gapped deployment:

Operate securely in fully isolated networks, no internet connection required.

Compliance-Ready

IEC 62443

Safous is a global cybersecurity team within the Internet Initiative Japan Inc. (IIJ) Group. With Safous, you can keep your corporate resources secure while giving your remote teams safe and easy network access through our zero trust security platform.
