

AT-A-GLANCE

Internal Vulnerability Assessment

**Visualize internal risk.
Strengthen control.
Prevent impact.**

Gain visibility into hidden internal risks across your environment — and reduce both security exposure and operational risk.

Internal risks are not visible — and not controlled

Hidden internal risks

Not visible from the outside

Limited branch visibility

Difficult to assess from HQ

Security resource gaps

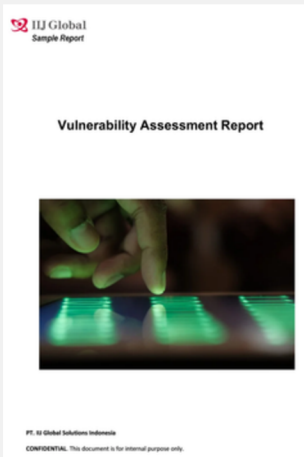

Risks are identified but not addressed

Paths for lateral movement

Weak sites enable spread

Centralized visibility and control of internal risk

Safous identifies internal vulnerabilities across your network based on defined IP ranges.

Understand and manage internal risk

- Identify vulnerabilities across internal assets
- Gain visibility into risk across sites and environments
- Prioritize remediation based on risk level
- Understand your overall internal risk posture

How Safous works

Asset Discovery

Find internal assets

Vulnerability Detection

Identify vulnerabilities

Risk Prioritization

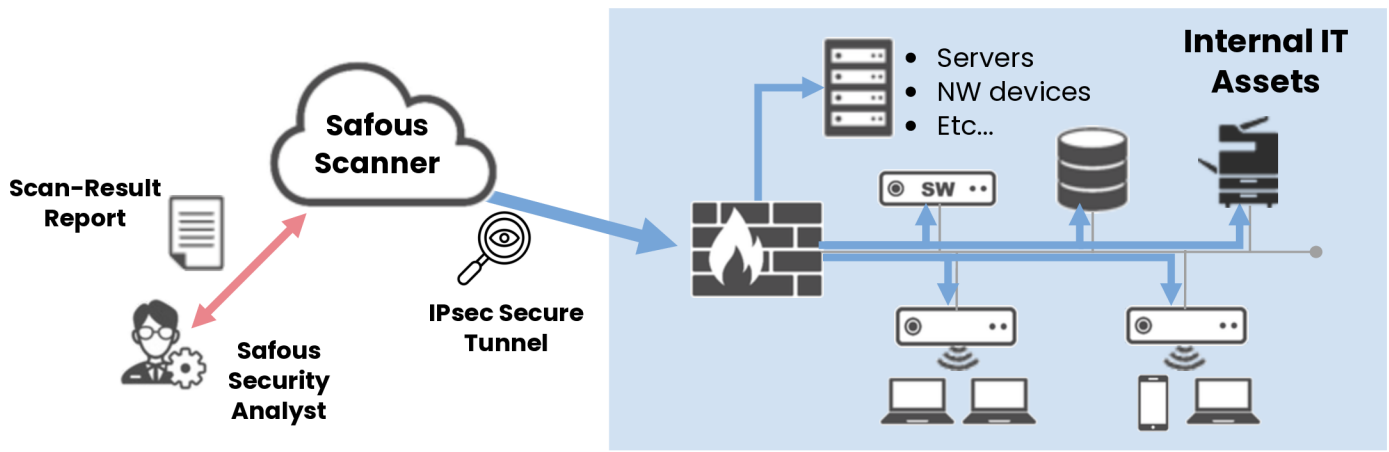

Prioritize critical risks

Reports & Guidance

Guide next actions

How the Internal Vulnerability Assessment works

Use Cases: Are these challenges familiar?

Regional Offices / Subsidiaries

Limited visibility

Distributed Environments

No unified risk view

Limited Security Resources

Risks remain unresolved

Governance Initiatives

No standardized control

Continuously identify, prioritize, and reduce internal risk across your organization.

Safous enables continuous visibility and control of internal risk, helping organizations manage security across distributed environments.

Turn insights into action

You don't just identify risks – you know what to do next.

- Expert analysis and interpretation
- Prioritized remediation guidance
- Optional consultation support

Safous is a global cybersecurity team within the Internet Initiative Japan Inc. (IIJ) Group. With Safous, you can keep your corporate resources secure while giving your remote teams safe and easy network access through our zero trust security platform.
